**Battleships in Danger**

The recent series on battleships and how they are built has naturally drawn a large number of questions as to how the ships are kept in good repair. In order to answer these questions, I have been permitted by the United States Naval Board of Construction and Repair to make a tour of inspection of the battleship New York. The purpose of this trip was to get a first-hand knowledge of how the ships are kept in condition, and to get an idea of the work that goes into the making of a battleship. I was given a most cordial welcome by the officers and crew, and was given every opportunity to see all parts of the ship.

**Surface Life Beneath on a Battleship**

Battleships have a surface life beneath which the crew must live, and which is as important as the fighting part of the ship. The life of the crew on a battleship is regulated by the officers, who are responsible for the safety and comfort of the men. The officers are also responsible for the discipline of the crew, and for maintaining order on the ship.

**No Silver Dollars of 1935**

Mr. W. T. Borden of the Republic of New Zealand, who is one of the most prominent figures in the field of stamp collecting, has recently announced the discovery of a new variety of the rare silver dollar of 1935. This discovery has created a great deal of interest among collectors, and is likely to bring about a considerable rise in the price of this coin.

**Make Rich by Standard Oil**

Mr. W. T. Borden, who is one of the most prominent figures in the field of stamp collecting, has recently announced the discovery of a new variety of the rare silver dollar of 1935. This discovery has created a great deal of interest among collectors, and is likely to bring about a considerable rise in the price of this coin.
