Government to Build Dock Which Will Prevent Accidents in Testing Submarines

Strange Craft Is Invention of Ex-Officer of Italian Navy and Is Latest Engineering Provision Against Certain Kind of Submarine Dangers.

The story of a battle at sea in which the American submarine got a chance to prove her worth is told in a naval report written several years ago. The report, which has just been issued, gives an account of the destruction of the British frigate Leander on December 16, 1814.

The Leander was a small vessel, but she was well armed and was the pride of the British fleet. She had been built at a cost of $1,500,000 and was armed with 200 guns. She was commanded by Captain Sir John Collier, who was a veteran of the War of 1812.

On December 16, 1814, the American submarine was sent out to sink the Leander. The submarine was equipped with two 4-pounder guns and was commanded by Lieutenant Joseph Warren. The submarine was 150 feet long and had a crew of 100 men.

The submarine approached the Leander and fired a shot at her. The Leander was hit and began to sink. The submarine then fired another shot and the Leander was completely submerged. The submarine then fired a third shot and the Leander sank to the bottom of the sea.

The submarine then surfaced and returned to base. The crew of the submarine was decorated for their bravery and the submarine was praised for its success.

This was the first time that an American submarine had been used in battle and it proved to be a success. The submarine was able to sink the Leander with ease and it showed that the submarine was a powerful weapon in the hands of the American navy.

The report also describes the construction of the submarine and the design of the submarine's weapons. It describes the submarine's ability to move silently and to fire its weapons accurately. It also describes the submarine's ability to stay submerged for long periods of time.

The report concludes that the submarine was a powerful weapon and that it would be a mistake to ignore its potential. It also recommends that the American navy should continue to develop and improve its submarines.

The report was written by Lieutenant Warren, who was the commanding officer of the submarine. He was a well-respected officer and was known for his bravery and his skill as a submarine commander.

The report was published in 1815 and it became a classic in the history of naval warfare. It is still studied today and is considered to be one of the most important reports ever written on naval warfare.
